

1 2. (Three Times Amended) A method of assembling a fan motor including a thermally  
2 dissipating surface to be mounted to an electronic component, a motor attached to said  
3 thermally dissipating surface, and an attaching plate having a leg portion in a peripheral  
4 portion thereof for fixing said motor to said thermally dissipating surface, wherein said  
5 thermally dissipating surface has a hole portion at least as large as said attaching plate, and a  
6 recessed portion that is formed on an attaching surface side of said thermally dissipating  
7 surface to said electronic component and that accommodates at least said leg portion of said  
8 attaching plate therein., said method comprising:  
9 passing said attaching plate through said hole portion;  
10 rotating the attaching plate through said hole portion;  
11 rotating the attaching plate so that said leg portion is accommodated in said recessed  
12 portion, said recessed portion being provided such that said recessed portion has a depth at  
13 least as large as a thickness of said leg portion; and  
14 fixing said leg portion to said thermally dissipating surface from said attaching surface  
15 side.

1 4. (Three Times Amended) A fan motor, wherein a recessed portion capable of  
2 accommodating an attaching plate of a motor is provided in a thermally dissipating surface of  
3 a heat sink on a side thereof which is to be mounted on an electronic component, and said  
4 attaching plate is fixed from an attaching surface side of said thermally dissipating surface to  
5 the electronic component in a state that said attaching plate is accommodated in said recessed  
6 portion,  
7 wherein said recessed portion has a depth at least as large as a thickness of said  
8 attaching plate portion being accommodated.

1 8. (Twice Amended) A structure for mounting a first plate member associated with a motor  
2 portion of a fan motor onto a second plate member having a first side and a second side  
3 opposite from said first side, said structure comprising:  
4 an opening portion formed through said second plate member;  
5 at least one recessed portion provided in said first side of said second plate member
